Aim

Investigate the anonymized data collection:

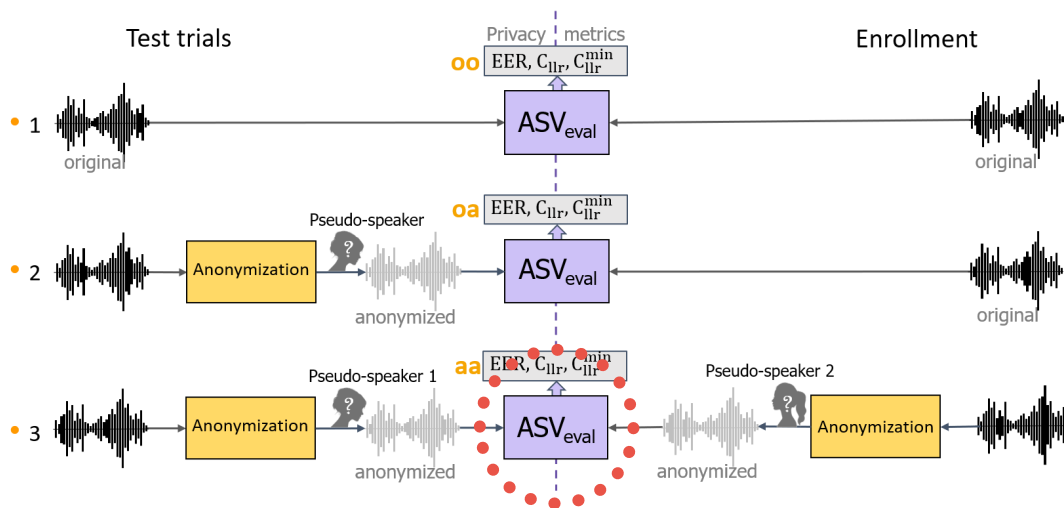

- Training more advanced attack models
- Downstream tasks, i.e. ASR training

Introduction: aim

Investigate the anonymized data collection:

- Training more advanced attack models ASV_{eval}^{anon}
- Downstream tasks, i.e. ASR training ASR_{eval}^{anon}

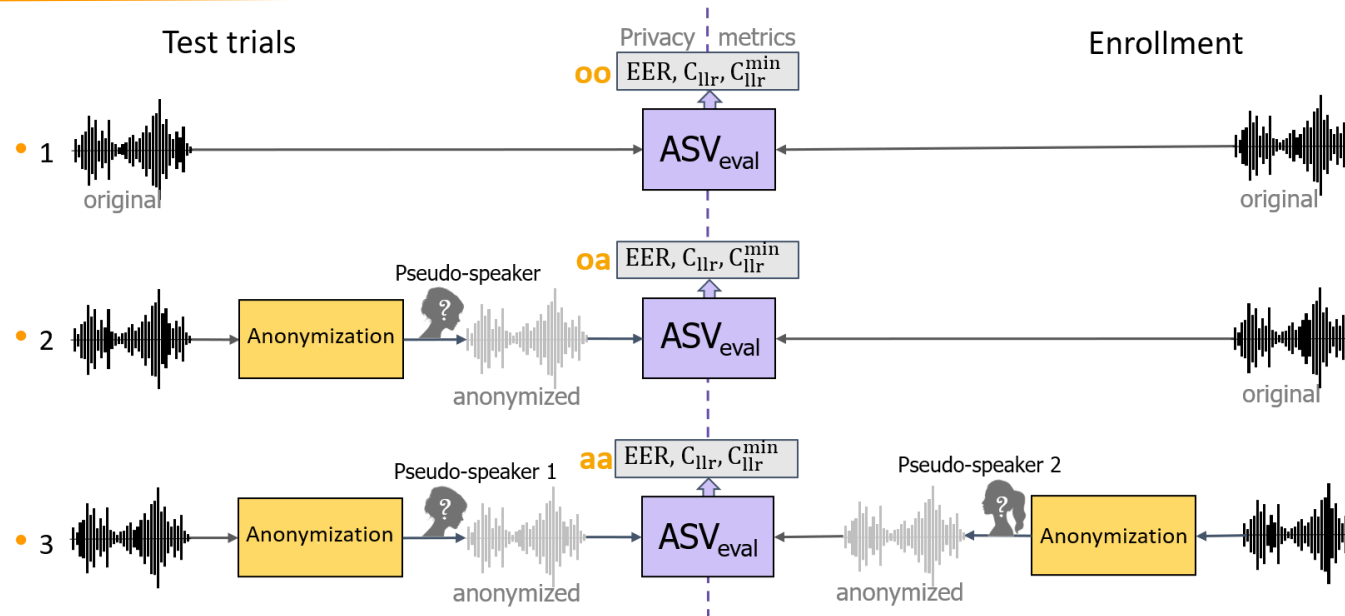

Objective evaluation:
automatic speaker verification (ASV_{eval})

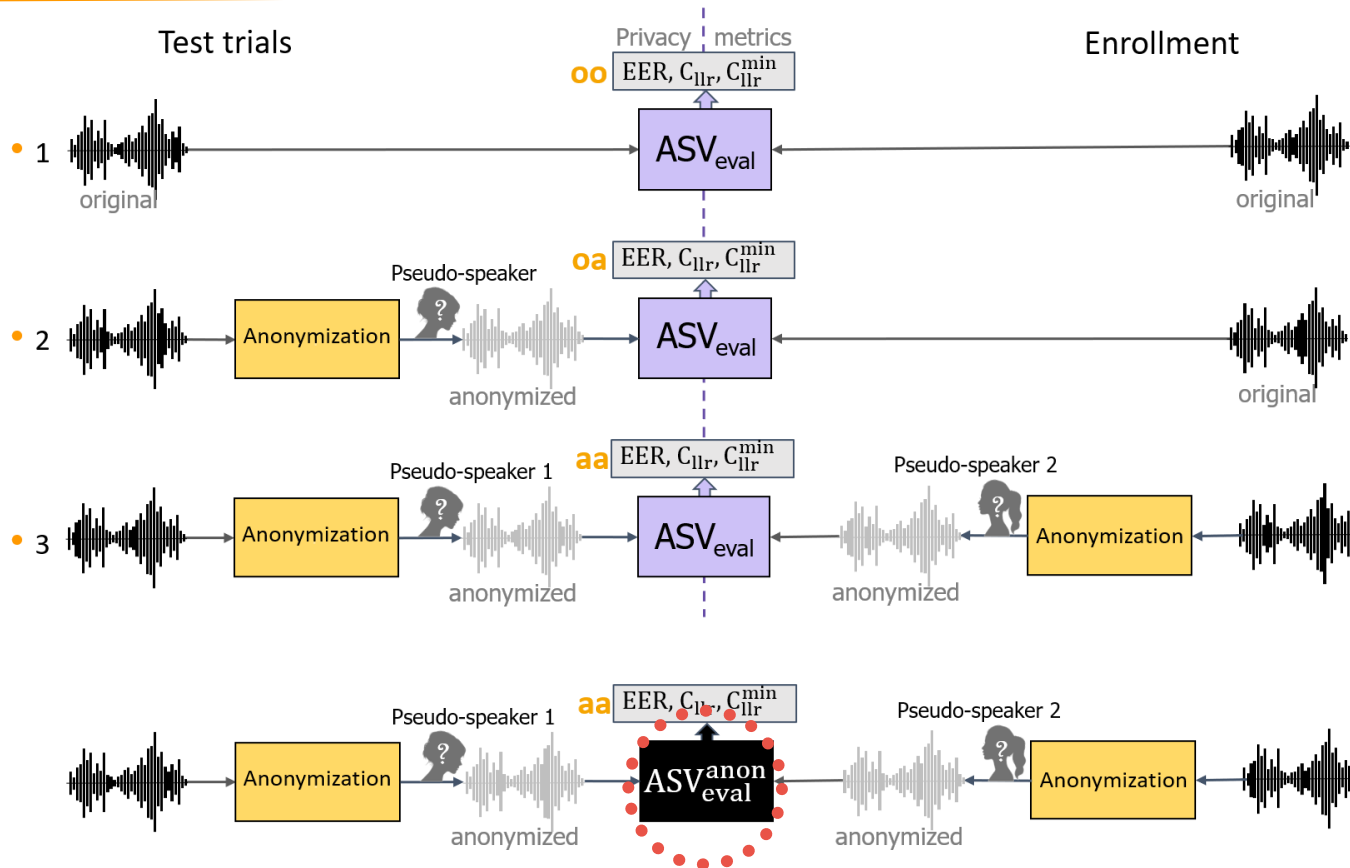

Objective evaluation:
automatic speech recognition (ASR_{eval})

Objective evaluation: automatic speaker verification (ASV_{eval})

Objective evaluation: automatic speaker verification (ASV_{eval})

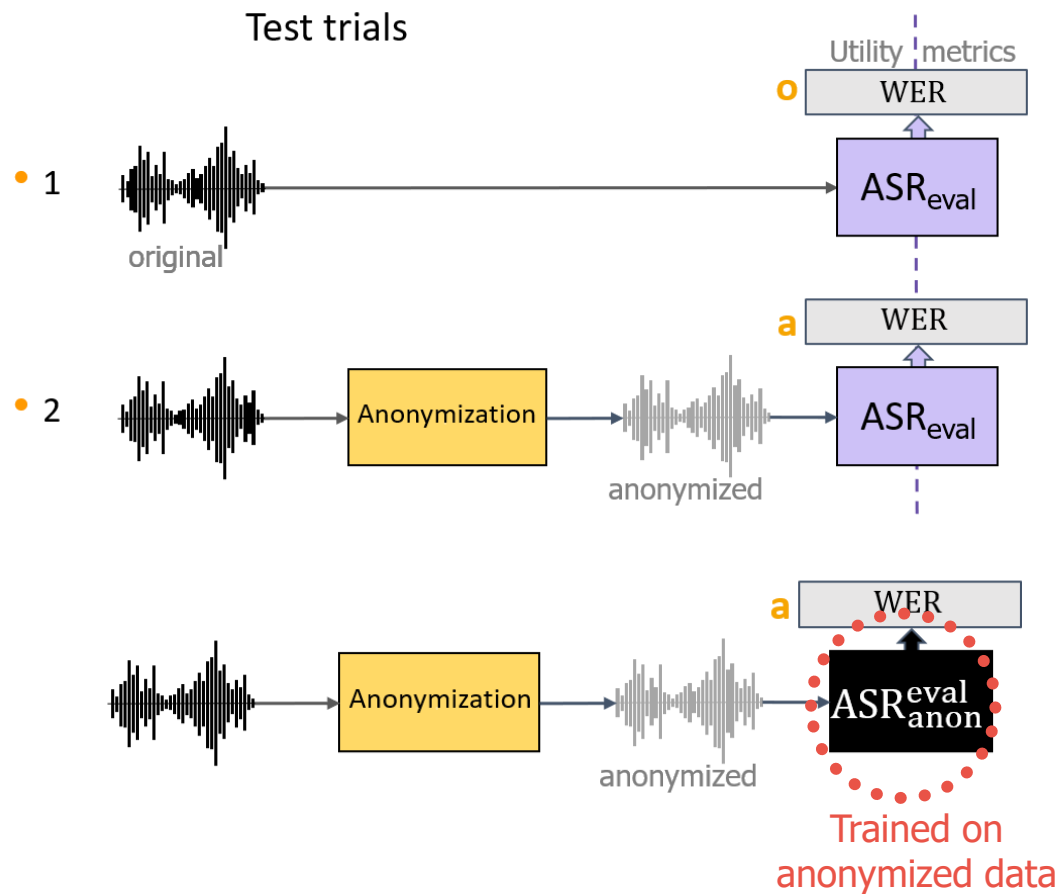

Trained on
anonymized data

Objective evaluation: automatic speech recognition (ASR_{eval})

Objective evaluation: automatic speech recognition (ASR_{eval})

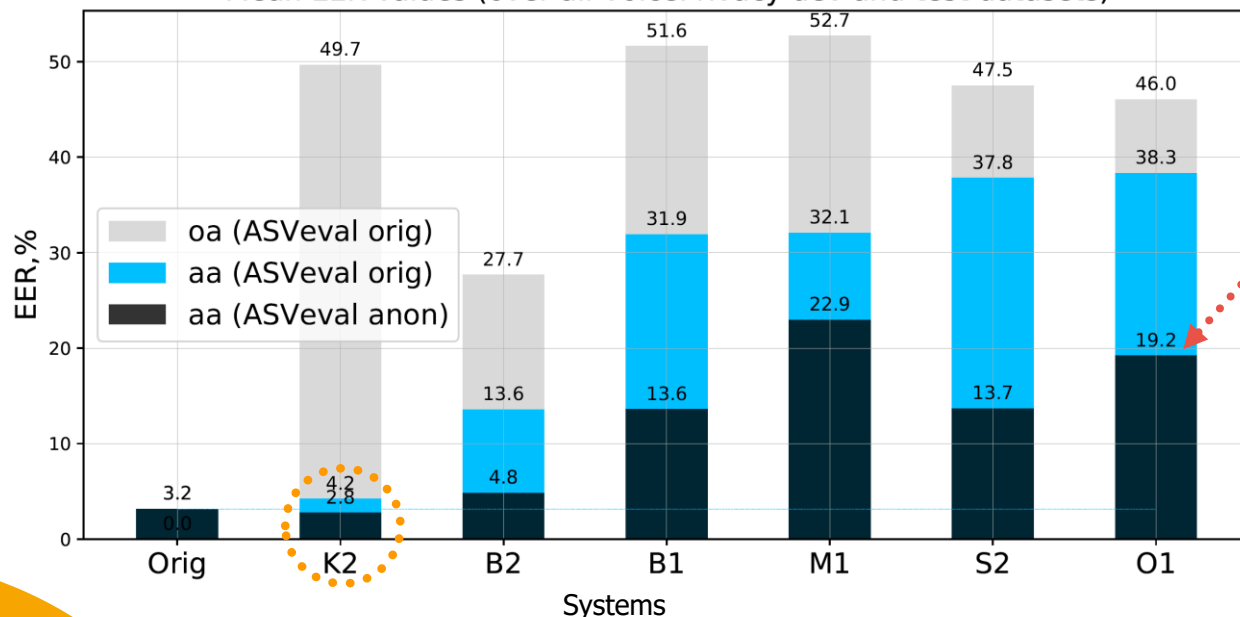

Post-evaluation analysis

Using anonymized speech data to train ASV_{eval}

Mean EER values (over all VoicePrivacy dev and test datasets)

More advanced attack model

Training ASV_{eval}^{anon} on **anonymized data** rather than original data leads to significant **EER reduction** for all systems in the case when the enrollment and trial data are anonymized

Post-evaluation analysis

Using anonymized speech data to train ASR_{eval}

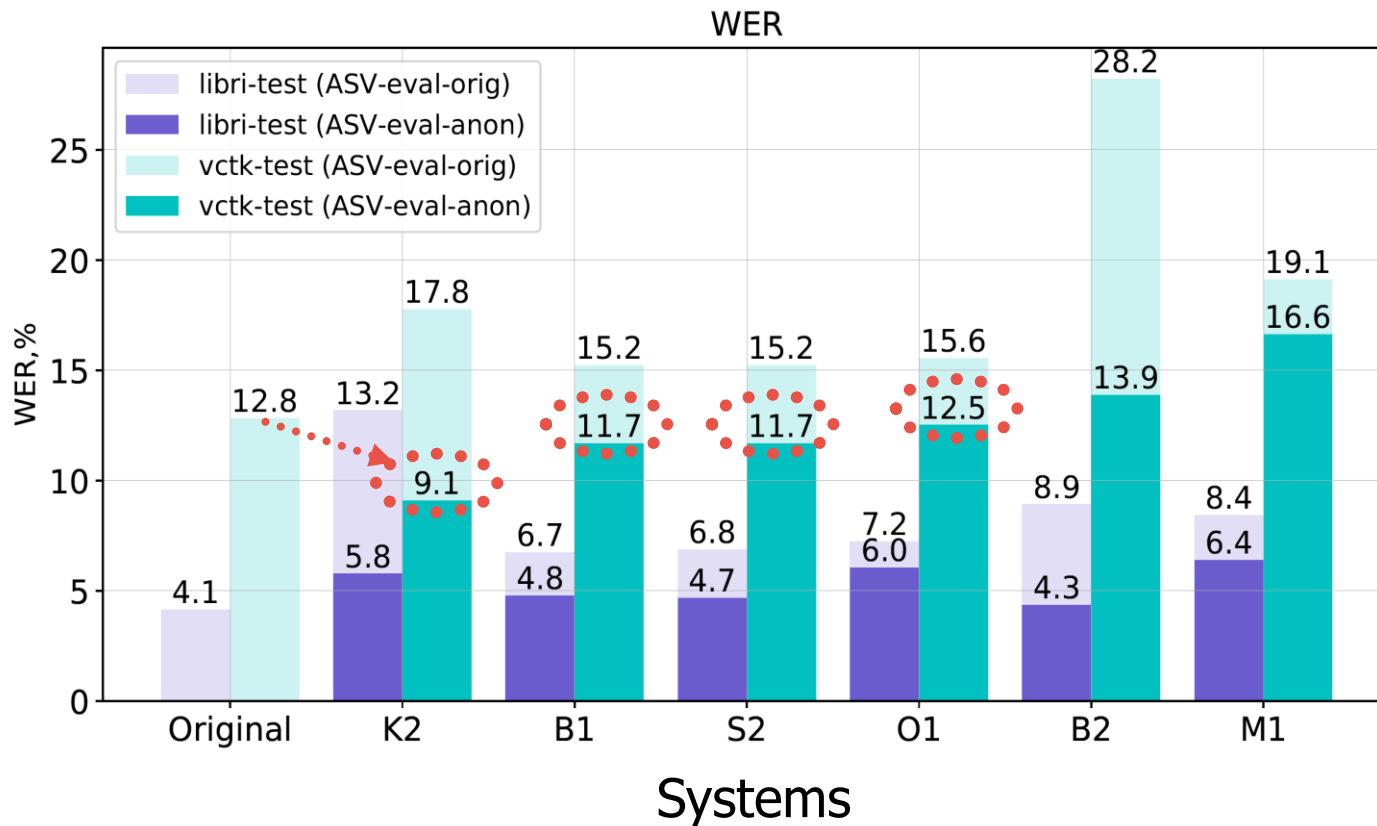

Efficient ASR training

Training ASR_{eval}^{anon} on **anonymized data** significantly **decreases WER**

Post-evaluation analysis

Using anonymized speech data to train **ASR_{eval}**

Voice similarity matrices: LibriSpeech-test-male

Using **original** speech data to train ASV_{eval}

[Noe 2020]

Using **anonymized** speech data to train ASV_{eval}^{anon}

Voice similarity matrices: LibriSpeech-test-male

Using **original** speech data to train ASV_{eval}

Using **anonymized** speech data to train ASV_{eval}^{anon}

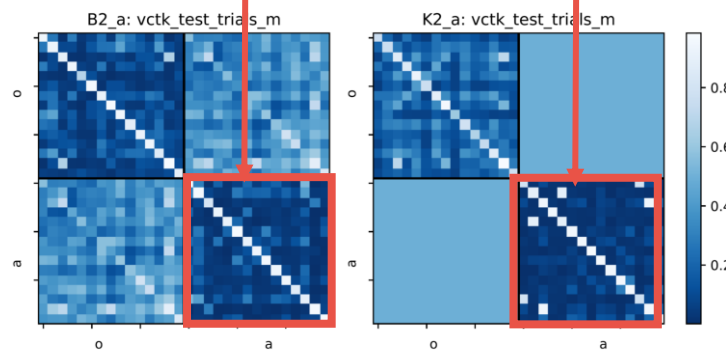

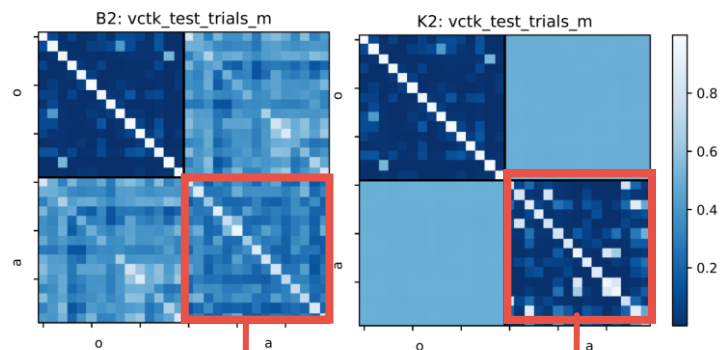

Voice similarity matrices: VCTK-test-male

Using **original** speech data to train ASV_{eval}

Using **anonymized** speech data to train ASV_{eval}^{anon}

Conclusions

- A strong attack model can be developed when an attacker has access to anonymized speech data
- Anonymized data can be successfully used in training ASR systems
